- All area's include 1 free touch-up, additional touch-ups 50% off.

PRE-PROCEDURE INFORMATION

All permanent cosmetic procedures are a multi-session process. You are required to come back for at least one touch-up visit before it can be determined that your work is complete. Touch-up visits are scheduled at 30+ day intervals. Patch tests are available on request. It is not advised to get a tattoo with severe liver or kidney issues.

Be prepared for the initial color intensity of your procedure to be significantly sharper, brighter, or darker than what is expected for the final outcome. It will take time for this transition based upon how quickly you heal.

While these tattooed colors may initially simulate the exact color and tone desired, they will not always remain a perfect match. Tattooed colors are constant, while your own skin color will vary depending on exposure to cold, heat, sun, and circulatory changes. For example, if your skin tans and you had a scar camouflage, your surrounding skin will become darker in appearance than the treated area.

1. Since delicate skin or sensitive areas may swell slightly or redden, some clients feel it is best not to make any social plans for a day or two following any procedure.
2. Any tweezing or waxing should be done at least 48 hours prior to the procedure; electrolysis no less than 5 days before. Do not resume ANY method of hair removal for at least two weeks.
3. Refrain from the use of alcohol, aspirin, aspirin-containing medications, ibuprofen, or other blood-thinning medications, fish oils or vitamin E for seven days before and two days after any procedure. Refrain from judgment-altering drugs for at least 24 hours prior to any procedure. No medication should ever be discontinued without first consulting your physician.
4. Any eyelash or eyebrow tinting or eyelash curling should be done no sooner than 48 hours before, or two weeks after the procedure.
5. Wear your normal make up or bring your brow pencils to your consult, but you do not have to for your procedure. **Please do not wear mascara** to an eyeliner procedure.
6. **DO NOT** wear contact lenses during or within 48 hours following the eyeliner procedure. **Remember to bring your glasses.** You may resume wearing your contact lenses as soon as your eyes return to their pre-tattooed condition.
7. **Eyeliner** cannot be done without Dr. note of okay with Glaucoma or eye issues that could be worsened with pressure applied to the eye area.

PERMANENT COSMETICS AFTER CARE INSTRUCTIONS

Proper care following your procedure is necessary to achieve the best results. Keep in mind that in many cases, some unevenness of color is to be expected. The purpose of the touch-up visit is to correct any color or shape issues. If during your healing process you have any questions or concerns, please contact us.

1. No makeup is to be applied for 72 hours (three days) after the procedure on the tattoo area. After any eyeliner procedure, use new mascara for the first 10 days after the 3 days of no makeup.
2. Ice packs protected with a cloth may be applied as necessary to reduce swelling. Sleeping slightly elevated helps alleviate swelling sometimes seen in the morning after facial procedures.
3. Wash your hands before touching any treated area. Damp cotton-tipped applicators may be used to gently cleanse the eye area.
4. Some itching is normal. **DO NOT PICK, PEEL, OR SCRATCH** the treated area or your color may heal unevenly and you risk scarring and infection.
5. Do not expose your healing skin to direct shower spray, skin creams, ointments, or lotions other than what you have been instructed to use for at least 3 days following your procedure.
6. Do not expose your healing skin to direct sun, tanning beds, hot tubs (tub bath if body area treated), saunas, salt water, chlorinated pools, or extremely hot water for 2 weeks following your procedure.
7. Apply provided cream to tattoo area 3 times a day for 3-5 days. Cream is not provided for eyeliner.

**PERMANENT COSMETICS
LONG TERM CARE**

1. Use a good sunscreen daily. Sunglasses for eyeliner. Sun exposure will fade your permanent cosmetics.
2. If you are planning chemical exfoliation, laser treatment, plastic surgery, or other medical procedure, please inform your provider of your cosmetic tattoo, injuries to the tattoo area may also affect the tattoo.
3. If you donate blood, Red Cross and Community Blood Center policy in MO allows you to donate after permanent cosmetic tattooing in a licensed/regulated clinic which we are.

**APROXIMATE HEALING SCHEDULE
FOR PERMANENT COSMETICS**

Eye Brows	
Day:	What to Expect:
1-2	What you see is about 20-60% darker, bolder, and more solid than what your healed result will present. There may be minimal swelling; however as the eyebrow area typically does not retain much fluid, swelling will be limited. The top layers of skin will begin to shed about day 3-5 and you will see a loss of color. This is normal.
3	Your eyebrows may begin to itch and the pigment may appear somewhat raised. DON'T SCRATCH THEM!
4-6	Your skin is now in rapidly exfoliating and if left alone, will shed evenly. The color under the skin will continue to appear light until the epidermis becomes more transparent.
30-40	Your eyebrows have had a full cycle of cellular regeneration in which the tattoo has now become part of the dermis, seen under the epidermis. If you are not 100% happy, call and come in for your touch-up.
Eye Liner	
Day:	What to Expect:
OF	This can vary from slightly puffy to swollen, heavy lids; light sensitive and possibly bloodshot eyes. It's advisable to sleep in an elevated position to help reduce swelling at night.
1	Eyes will be swollen and perhaps a bit 'crusty' upon waking. The swelling will reduce after being in an upright position and from blinking and increased circulation to the area. Avoid heavy lifting, physical exertion, and crying.
2	Eyes will be less swollen, but will feel tight. The lash area will feel sore if touched.
3-4	The top layer of skin will begin to flake off in little stitch looking lines, although some people do not notice the exfoliation. DO NOT PICK- you will pull pigment out and end up with uneven color. Blinking helps eliminate the small pieces of pigment and epidermis that has detached. It is important not to pick at it or rub the eyes.
7-9	All shedding should be complete. You are safe to put your face back in the shower spray. During this time, the tattoo may appear to have vanished , this is a normal part of the healing process, and the pigment will re-emerge in 1-2 days .
10	Pigment, if it faded, should have returned. What you see now is very close to the healed result. If it is not as you like, please wait the final three weeks and return for a touch-up procedure.

NOTE: The outcome of permanent cosmetic procedures is dictated by the canvas (your skin). The better condition your skin is in, the better the final result will be. Very oily, dry, or sun damaged skin can be very difficult to achieve a beautiful even result. Mature clients may need an additional one to two weeks healing for the final results to appear. The better you take care of your skin and protect it from UV rays, the better the outcome and lifespan of the permanent cosmetics procedures.
